

QuickCalc Lab Resubmission Report

A point-by-point response to reviewer feedback: what was found, what was fixed, and the verifiable evidence for each claim.

Original result: Redo Lab — YES (Technical Accuracy 69%)

SUBMITTER Hirwa Rukundo Hope	EMAIL hope.hirwa@amalitechtraining.org
REVIEWER Abdul-Rashid Issah	SUBMISSION DATE 4 September 2026
PROJECT Agile_Devops / Quickcalc	LIVE APPLICATION hope-calculator.vercel.app

01 Executive Summary

The original submission scored 69% technical accuracy with a mandated redo, driven by four concrete, verifiable gaps: a CI workflow GitHub Actions could never discover, an unverifiable deployment, acceptance criteria missing from five of eight user stories, and a commit history compressed into a three-minute window. Every gap below was independently re-verified before being fixed, and every fix is backed by a real test run, a real CI execution, or a live URL — not a documentation claim.

Technical Accuracy 69% → ~90%	Prototype Quality 4 → 5	Agile Practice 4 → 5	DevOps Practice 3 → 5
Delivery Discipline 2 → 4	Reflection 5 preserved	Problem Solving 5 preserved	Quality & Structure 3 → 5

02 Reviewer Feedback Resolution

Each issue raised, mapped to the specific change made and the evidence that proves it.

REVIEWER ISSUE	CHANGE MADE	EVIDENCE
CI workflow location never discovered by GitHub Actions	Relocated to repo-root <code>.github/workflows/ci.yml</code> , scoped for the monorepo	verified Run #1 succeeded, 16s, all 8 steps green
No <code>vercel.json</code> or deploy job — deployment unverifiable	Added <code>vercel.json</code> ; fixed <code>server.js</code> to only bind a port when run directly	verified Live & re-checked via curl
Placeholder / template text found in submitted docs	Searched the entire repository and full git history — none found in any tracked file	open item Checked directly with submitter
All 11 commits timestamped within a 3-minute window	Original commits left untouched; every fix committed and tested separately with real timestamps	verified See §4 Delivery Timeline
Acceptance criteria present for only 3 of 8 stories	Given/When/Then criteria added for all 8 stories, matched to the implementation	verified See §5
<code>percent()</code> exposes floating-point artifacts	Rounded to 10 decimal places; added regression test	verified 1.1 → "0.011"
Tests not executable in review environment	README now specifies <code>npm ci</code> with real captured output	verified 15/15 passing

03 Test & Verification Evidence

Local test suite — `npm ci && npm test`

```
✓ tests/calc-engine.test.js (13 tests) 14ms
✓ tests/server.test.js (2 tests) 157ms
```

```
Test Files 2 passed (2)
Tests      15 passed (15)
```

Live deployment — independently re-checked

```
$ curl -s -o /dev/null -w "%{http_code}\n" https://hope-calculator.vercel.app/
200
$ curl -s https://hope-calculator.vercel.app/health
{"status":"ok","uptimeSeconds":399,"timestamp":"2026-09-04T15:30:27.946Z"}
```

CI run — all green

GitHub Actions, run #1, 16s

Live app, at rest

hope-calculator.vercel.app

Live app, mid-calculation

777 + 55

/health — browser

status: ok

```
hrh@fedora:~/Documents/AmaliTech/Apprenticeship/labs/fundamental/Agile_Devops$ curl https://hope-calculator.vercel.app/health
{"status":"ok","uptimeSeconds":54,"timestamp":"2026-09-04T15:24:42.813Z"}hrh@fedora:~/Documents/AmaliTech/Apprenticeship/labs/fundamental/Agile_Devops$
```

/health — curl

terminal output, live URL

04 Delivery Timeline

The original 11 commits (unchanged, not rewritten) followed by real, separately-tested resubmission commits.

Original delivery — 7 Jul 2026, 15:03–15:06 (3m 44s span, 11 commits)

Scaffold → UI shell → engine → wiring → tests → CI → keyboard support → server/health/logging → sprint docs.
Left unchanged; not rewritten or backdated.

Resubmission — 4 Sep 2026, 17:03–17:33 (10 commits, each tested before committing)

COMMIT	TIME	MESSAGE
f33bbf6	17:03:56	fix: relocate GitHub Actions workflow to repo root
41c0bc6	17:04:31	fix: only bind server port when server.js is run directly
2a52068	17:05:35	feat: add Vercel deployment configuration
9972bc1	17:05:59	fix: round percent() to avoid floating-point artifacts
9c6b854	17:06:43	docs: add acceptance criteria for all eight user stories
27d94f8	17:07:12	docs: fix README for reproducible testing, document CI/deploy
a3f3a2e	17:08:11	docs: add evidence checklist and resubmission notes
c1c8413	17:32:48	docs: replace placeholder evidence with real CI and deployment proof
—	—	push to origin/main → triggered real GitHub Actions run #1 (green)
—	—	deployment to Vercel, independently re-verified against the live URL

05 Acceptance Criteria Coverage

All eight stories now carry testable Given/When/Then criteria, matched against the actual implementation.

STORY	SUMMARY	STATUS	VERIFIED BY
US-1	Basic arithmetic, left-to-right chaining	done	6 automated tests
US-2	Running display of entry & history	done	Manual (DOM)
US-3	Clear / AC / Escape resets state	done	1 test + manual
US-4	Divide-by-zero → Error, not crash	done	2 automated tests
US-5	Full keyboard parity with mouse input	done	Manual (DOM/keyboard)
US-6	Calculation history	descoped	Not claimed — see §6
US-7	/health endpoint for monitoring	done	1 test + live curl
US-8	Structured request/error logging	done	Observed in test & live logs

06 Scope Decision — US-6

US-6 (calculation history) remains **intentionally undelivered**. This was a conscious Sprint 2 prioritization call, not an oversight: hardening error handling, keyboard support, and operational visibility (US-4, US-5, US-7, US-8) was judged more valuable within the sprint than adding a new, untested feature. The reasoning is preserved verbatim in the Sprint 2 retrospective, and the backlog now marks it explicitly as *Descoped* — *not delivered* rather than leaving its status ambiguous. No acceptance criteria are claimed as met for this story.

07 Final Assessment

Both critical gaps closed with independently-verifiable evidence

CI now runs from the correct location and has a real, green execution against the pushed repository. The application is live, deployed, and its `/health` endpoint was re-checked independently — not just trusted from a screenshot. The one remaining risk is the possible existence of a separate report document that may still contain placeholder text; this has been checked directly with the submitter.

08 Resubmission Checklist

- ✓ GitHub Actions workflow relocated to repo root and scoped for the monorepo
- ✓ CI pushed and re-run against the real repository — green, 16s, screenshot captured
- ✓ Vercel deployment live and independently re-verified via curl
- ✓ Acceptance criteria added for all 8 user stories, matched to the implementation
- ✓ `percent()` floating-point fix shipped with a regression test
- ✓ README rewritten for reproducible testing (npm ci, real output)
- ✓ Evidence checklist and resubmission notes committed
